Aryan Awasthi

Data Analytics | Machine Learning | Statistical Modeling

New Delhi, India ✧ +91 9871037801 ✧ aryanawasthi017@gmail.com ✧ github.com/Techy-A ✧ linkedin.com/in/aryan--awasthi

Electronics & Computer Engineering undergrad (2027) with internship experience in statistical model evaluation and cost analytics. Comfortable across the pipeline, from SQL and dashboarding through to ML systems in Python and PyTorch.

EDUCATION

B.E. Electronics and Computer Engineering | 2023 - 2027 (Expected) Thapar
Institute of Engineering and Technology (TIET), Patiala, Punjab

- Other Academic Achievements: JEE Mains 2023: 92.2 percentile | Class XII (CBSE): 84% | Class X: 85%

RELEVANT EXPERIENCE

AI Research Intern, Data & Model Evaluation | Appy Pie (Pixazo), Noida — Jun 2026 - Jul 2026

- Designed a statistical evaluation system (Elo, Bradley-Terry MLE, bootstrap confidence intervals) scoring 1,050 match-ups across 15 models; caught 3 broken scoring signals and a leaderboard discrepancy pre-launch.
- Shipped a 22-panel analytics dashboard (React) with live per-model cost data, an Elo-per-dollar ranking, and a quality-versus-cost Pareto frontier that became the team's reference for model purchasing decisions.
- Probed 6+ production model endpoints to document undocumented behavior, including a 14-image hard input limit, async submit-then-poll patterns, and field-name mismatches, correcting the public API reference for multiple models.
- Audited documentation across a 73-model catalog (image, video, audio, 3D), surfacing a systemic description-rendering bug affecting every model page and correcting pricing inconsistencies across all modalities.
- Drove adoption of a standardized cost-tracking process across the team, replacing manual reporting with an automated pipeline covering 15+ models across 6 modalities.

PROJECTS

CollegeBot: End-to-End RAG Chatbot — Aug 2025 - Mar 2026

- Engineered a production-grade Retrieval-Augmented Generation system using LangChain, ChromaDB, and sentence-transformers, integrating Microsoft Phi-3-mini, Mistral-7B, and GPT-3.5-turbo with QLoRA fine-tuning.
- Designed an interactive Streamlit application with evaluation metrics achieving 92% faithfulness, 87% answer relevance, and 91% context precision.

Stock Market Direction Prediction using ML & BiLSTM — Dec 2024 - Feb 2025

- Constructed an end-to-end time-series pipeline on 5 years of market data, engineering 50+ features (RSI, MACD, Bollinger Bands, volatility, lag-based indicators).
- Compared 3 model families (Random Forest, XGBoost, BiLSTM) with time-aware validation, evaluating on F1, ROC-AUC, precision, and recall to select the best performer.
- Developed a backtesting framework reporting Sharpe ratio, cumulative returns, and drawdown to validate the model's real-world decision value.

Plato Sniper: Poker Decision Engine

- Implemented a hand-equity estimator using Monte Carlo simulation (1,500+ random trials) to evaluate win rates under incomplete information.
- Modeled GTO-inspired strategy by comparing simulated equity against pot odds to recommend actions.

SKILLS

Data Analysis & BI: SQL, PostgreSQL, MongoDB, Power BI, Excel/Google Sheets (incl. formula automation), Pandas, NumPy

Analytics & Product Tools: Google Analytics, Figma, BigQuery, Mixpanel, Hotjar, MS Clarity

Statistical Methods: Elo & Bradley-Terry rating systems, significance/hypothesis testing, confidence intervals, time-series evaluation, classification metrics (F1, ROC-AUC, precision/recall)

Programming: Python, C++, JavaScript, FastAPI, Flask, Django

ML & Generative AI: Scikit-learn, XGBoost, TensorFlow/Keras, PyTorch, LangChain, RAG, QLoRA/PEFT, BiLSTM

Tools & Cloud: Git, Docker, Kubernetes, AWS, Google Workspace (Sheets, Docs, Colab), Streamlit, Jupyter Notebook

EXTRACURRICULAR ACTIVITIES

Low Voltage Systems, Team Fateh — *Aug 2023 - Jul 2024*

- Built a sensor integration project using an MPU-6050 gyroscope to generate driver indications such as direction, speed, and temperature-based signals.
- Gained hands-on exposure to PCB design, component-level understanding, and system-level debugging.
